Appln. No. 09/935,756
Amendment A

Amendments to the Claims:

Claim 1 (Currently Amended): A system comprising:

- a network;
- a display;
- a removable media; and
- a computing device operably coupled to said removable media, said network, and said display, said computing device at least once accessing data on said network, said computing device comprising:
 - a storage device,
 - a browser having a presentation engine displaying content on said display,
 - an application programming interface residing in said storage device,
 - a decoder processing content received from said removable media and producing media content substantially suitable for display on said display, and
 - a navigator coupled to said decoder and said application programming interface, said navigator facilitating user ~~[[or]]~~ and network-originated control of the playback of said removable media, said computing device receiving network content from said network and combining said network content with said media content, said presentation engine displaying said combined network content and media content on said display.

Claim 2 (Currently Amended): A media services interface for use in controlling the extraction of information from a readable medium by a computing device comprising:

- a command handler configured to execute received commands extracted from network-originated content to control playback of removable readable medium;

Amendment A

a properties handler configured to report the state of a system attribute in response to a query; an event generator configured to provide notification of one or more system events; a cookie manager configured to generate at least one system cookie for preserving information for later recall; and

a navigator state module operably coupled to said command handler, said properties handler, said event generator, and said cookie manager, said navigator state module configured to maintain information regarding the state of said information extraction from said readable medium.

Claim 3 (Original): A media services interface as in claim 2 further comprising:

a bookmark manager configured to generate one or more bookmarks, each said bookmark preserving playback information regarding a position in an information stream extracted from said readable medium, said bookmark enabling later return to said position in said information stream.

Claim 4 (Original): A media services interface as in claim 3 further comprising:

a command library comprising one or more commands for use with said command handler, said one or more commands comprising:

a command configured to cause said computing device to retrieve a medium identifier from said readable medium, said medium identifier comprising information unique to said readable medium.

Claim 5 (Original): A media services interface as in claim 4, said command library further comprising:

a command configured to cause said said bookmark; and

a command configured to retrieve a stored bookmark and cause a return to a position in an information playback stream as indicated by said stored bookmark.

Amendment A

Claim 6 (Original): A media services interface as in claim 4, said command library further comprising:

a command for connecting to a network operably connected to said computing device.

Claim 7 (Original): A media services interface as in claim 6, said command library further comprising:

a command for closing a previously established connection to a network operably connected to said computing device.

Claim 8 (Original): A media services interface as in claim 3 further comprising:

a properties library comprising one or more properties for use with said properties handler, said one or more properties comprising:

a property indicating the type of ROM data on said readable media operably coupled to said computing device.

Claim 9 (Original): A media services interface as in claim 8 further comprising:

a display for displaying visual information; and

wherein said properties library comprises a code routine for ascertaining the full screen mode state of said screen.

Claim 10 (Original): A media services interface as in claim 2 further comprising:

an identifier engine configured to receive information from said computing device regarding the identity of either said removable media or said computing device, said identifier engine operably coupled to said navigator state module and said cookie manager.
